

## Department of Computer Technology

### Vision of the Department

*To be a well-known centre for pursuing computer education through innovative pedagogy, value-based education and industry collaboration.*

### Mission of the Department

*To establish learning ambience for ushering in computer engineering professionals in core and multidisciplinary area by developing Problem-solving skills through emerging technologies.*

## Session 2025-2026

<b>Vision:</b> Dream of where you want.	<b>Mission:</b> Means to achieve Vision
---	---

**Program Educational Objectives of the program (PEO):** (broad statements that describe the professional and career accomplishments)

PEO1	<b>Preparation</b>	<b>P: Preparation</b>	<b>Pep-CL abbreviation pronounce as Pep-si-IL easy to recall</b>
PEO2	<b>Core Competence</b>	<b>E: Environment (Learning Environment)</b>	
PEO3	<b>Breadth</b>	<b>P: Professionalism</b>	
PEO4	<b>Professionalism</b>	<b>C: Core Competence</b>	
PEO5	<b>Learning Environment</b>	<b>L: Breadth (Learning in diverse areas)</b>	

**Program Outcomes (PO):** (statements that describe what a student should be able to do and know by the end of a program)

### Keywords of POs:

Engineering knowledge, Problem analysis, Design/development of solutions, Conduct Investigations of Complex Problems, Engineering Tool Usage, The Engineer and The World, Ethics, Individual and Collaborative Team work, Communication, Project Management and Finance, Life-Long Learning

**PSO Keywords:** Cutting edge technologies, Research

“I am an engineer, and I know how to apply engineering knowledge to investigate, analyse and design solutions to complex problems using tools for entire world following all ethics in a collaborative way with proper management skills throughout my life.” to contribute to the development of cutting-edge technologies and Research.

**Integrity:** I will adhere to the Laboratory Code of Conduct and ethics in its entirety.

### Name and Signature of Student and Date

(Signature and Date in Handwritten)

Aryan Sukhdewe

**Department of Computer Technology**

**Vision of the Department**

*To be a well-known centre for pursuing computer education through innovative pedagogy, value-based education and industry collaboration.*

**Mission of the Department**

*To establish learning ambience for ushering in computer engineering professionals in core and multidisciplinary area by developing Problem-solving skills through emerging technologies.*

<b>Session</b>	<b>2025-26 (ODD)</b>	<b>Course Name</b>	<b>HPC Lab</b>
<b>Semester</b>	<b>7</b>	<b>Course Code</b>	<b>22ADS706</b>
<b>Roll No</b>	<b>40</b>	<b>Name of Student</b>	<b>Aryan Sukhdewe</b>

Practical Number	<b>2</b>
Course Outcome	1. Understand and Apply Parallel Programming Concepts 2. Analyze and Improve Program Performance. 3. Demonstrate Practical Skills in HPC Tools and Environments.
Aim	<b>Measuring Program Performance</b>
Problem Definition	To understand how long a program runs. To identify bottlenecks. To optimize code and compare different implementations. To benchmark HPC applications.
Theory (100 words)	This practical demonstrates the importance of measuring program performance for analyzing execution efficiency, identifying bottlenecks, and optimizing code. Using a matrix multiplication example, we first implemented a serial version and measured execution time with the C <code>clock()</code> function. Then, we parallelized the computation using OpenMP, measuring time with <code>omp_get_wtime()</code> . Results showed significant speedup when using multiple threads, highlighting the effectiveness of shared-memory parallelism in High-Performance Computing (HPC). Performance measurement allows fair comparison between serial and parallel implementations, ensuring optimized resource utilization. Overall, the

Code:

**Step 1: Write the serial (single-threaded) matrix**

**multiplication code**

Save as matmul\_serial.c:

```
#include <stdio.h>

#include <stdlib.h>

#include <time.h>

void matmul(int N, double *A, double *B, double *C) {

    for (int i = 0; i < N; i++)

        for (int j = 0; j < N; j++) {

            double sum = 0;

            for (int k = 0; k < N; k++)

                sum += A[i*N+k] * B[k*N+j];

            C[i*N+j] = sum;

        }

    }

    int main(int argc, char **argv) {

        if (argc < 2) {

            printf("Usage: %s matrix_size\n", argv[0]);

            return 1;

        }

        int N = atoi(argv[1]);

        double *A = malloc(N*N*sizeof(double));

        double *B = malloc(N*N*sizeof(double));

        double *C = malloc(N*N*sizeof(double));

        // Initialize matrices A and B

        for (int i = 0; i < N*N; i++) {
```

**Department of Computer Technology**

**Vision of the Department**

*To be a well-known centre for pursuing computer education through innovative pedagogy, value-based education and industry collaboration.*

**Mission of the Department**

*To establish learning ambience for ushering in computer engineering professionals in core and multidisciplinary area by developing Problem-solving skills through emerging technologies.*

```
A[i] = 1.0;

B[i] = 2.0;

}

clock_t start = clock();

matmul(N, A, B, C);

clock_t end = clock();

double time_spent = (double)(end - start) / CLOCKS_PER_SEC;

printf("Serial MatMul elapsed time: %f seconds\n", time_spent);

free(A); free(B); free(C);

return 0;

}
```

**Step 2: Compile and run the serial program**

```
gcc -o matmul_serial matmul_serial.c
```

```
./matmul_serial 500
```

You will see output like:

Serial MatMul elapsed time: 12.345678 seconds

**Step 3: Add OpenMP parallelization and timing**

Save as matmul\_openmp.c:

```
#include <stdio.h>;
```

```
#include <stdlib.h>;
```

```
#include <omp.h>;
```

```
void matmul(int N, double *A, double *B, double *C) {
```

```
#pragma omp parallel for collapse(2)
```

```
for (int i = 0; i < N; i++)
```

```
for (int j = 0; j < N; j++) {
```

```
double sum = 0;

for (int k = 0; k < N; k++)
    sum += A[i*N+k] * B[k*N+j];

C[i*N+j] = sum;
}
}

int main(int argc, char **argv) {

if (argc < 2) {

printf("Usage: %s matrix_size\n", argv[0]);

return 1;

}

int N = atoi(argv[1]);

double *A = malloc(N*N*sizeof(double));

double *B = malloc(N*N*sizeof(double));

double *C = malloc(N*N*sizeof(double));

for (int i = 0; i < N*N; i++) {

A[i] = 1.0;

B[i] = 2.0;

}

double start = omp_get_wtime();

matmul(N, A, B, C);

double end = omp_get_wtime();

printf("OpenMP MatMul elapsed time: %f seconds\n", end - start);

free(A); free(B); free(C);

return 0;

}
```

**Step 4: Compile and run the OpenMP version**

	improvement with parallelization. Initially, compilation errors occurred because of incorrect characters (&lt;t ; instead of <) due to HTML entity issues when copying code, but after corrections the program compiled successfully. The results demonstrate that OpenMP significantly reduces execution time by distributing work across multiple threads. This confirms the benefit of parallel programming in High-Performance Computing (HPC) environments, where optimizing execution time is essential for large-scale applications.

Conclusion	The practical demonstrates that parallelization using OpenMP significantly reduces execution time compared to serial execution, proving the importance of performance measurement and optimization in developing efficient high-performance computing applications.
Plag Report (Similarity index < 12%)	 <p>The screenshot shows a plagiarism checker interface with a sidebar on the left containing tools like 'Plagiarism Checker', 'Make it Unique', 'Check Grammar', 'Detect AI', 'Summarizer', and 'AI Humanizer'. The main area displays the 'Result' for a document titled 'HPC Lab'. It shows a similarity index of 8%, with a breakdown of 58% Exact Match, 25% Partial Match, and 17% Unique. A list of sources is provided, including 'An Autonomous Institution affiliated to Rashtrasant Tukadoji Maharaj Nagpur University' and 'https://github.com/aryanycce/HPC-Practicals'.
